

Rolleri Tools Trolley

During Euroblech Exhibition 2008 in Hannover, Rolleri has introduced the new tools trolley.

It is a trolley, with the aim of a tools holder, invented by R&D department, that allows in total safety the handling of the tools to be mounted on the press brake tooling.

Shape and dimensions have been carefully studied by our technicians, with the purpose to give to the tools trolley great solidity and at the same time, handiness. Moreover, its pyramid-shaped structure allows the operator an easy handling of punches and dies near the machine during the phase of tools change.

Rolleri Tools Trolley will assure you to save a lot of time, will preserve your tools and make the work of your operators easier.

This system has been studied to carry tools with promecam, beyeler and trumpf connection systems (see the table below) with a maximum capacity of 600 kilos
